

# ATM Remote Key Load

*Automate Your Master Key Distribution Securely*

## Modern Technology Significantly Improves Antiquated Master Key Process and Provides Huge Benefits

With the introduction of new regulations and security requirements by the various card organizations and international standard bodies, ATM deployers and banks are allocating an ever increasing amount of resources and budget in managing their security keys.

With the traditional ATM master key distribution process, one or more security officers must travel to every ATM and manually enter the new master key using the ATM's terminal service panel. This is an inefficient and labor intensive manual process that is time consuming and costly. In addition, this process has great potential for errors and fraud.

Now, the technology to enable one central point of control and management of ATM master keys has emerged with a solution known as Remote Key Load. As many ATM manufacturers now offer Remote Key Load capability on their devices and as the software to enable it has evolved, the solution is quickly spreading across the globe and becoming standard.

### Take Control and Automatically Lock Down ATM Security from the Host

Euronet Software Solutions' Remote Key Load module provides an automated and virtually effortless method of electronically managing and distributing ATM master keys. With our module, banks and ATM deployers operating networks of all sizes can automate and centralize their process resulting in time, budget and resource savings, operational efficiency improvements and security enhancements.

*Remote Key Load is the automated process of distributing ATM master keys from the host to the device rather than having to be entered at the physical location.*

**AUTOMATE**  
*Your ATM Master Key Distribution*

**IMPROVE**  
*Operational Efficiency*

**ENHANCE**  
*ATM Transaction Security*

**SAVE**  
*Time, Budget and Resources*

Using technology based on principles of public key cryptography our Remote Key Load module provides mutual authentication between the host and the ATM and fulfills the dual control concept which ensures that no single person has access to the entire key value. Our module supports Diebold, NCR and Wincor Nixdorf ATMs.

### **The Benefits of Implementing ATM Remote Key Load**

- Provides a centralized, automated process while improving security and lowering associated costs
- Reduces the number of time consuming and costly onsite visits
- Improves operational efficiencies by freeing up human resources
- Helps you stay compliant
- Helps protect you and your customers against possible fraud and criminal activity
- Provides a more streamlined process with mass key distribution
- Reduces the risk of human data entry errors
- Supports longer keys to deter hacking
- Faster, easier and more reliable process
- Increases ATM Availability
