

QR Payments

The Universal Way to Pay

Turn any mobile device with a camera into a secure payment terminal.

What are QR Payments?

QR payments let customers scan a static or dynamic QR code to pay instantly using their mobile banking app, digital wallet, or payment platform.

How it works:

- 1 Merchant displays QR code.
- 2 Customer scans with app.
- 3 Customer approves & funds are transferred.

Secure Transactions

QR payments offer reduced fraud risk compared to cash. Transactions are encrypted and offer security equal or > than legacy POS.

Empower every merchant, everywhere.

Benefits:

Low Cost Acceptance

No POS terminals – just print or display a QR code

Universal Accessibility

Works with any mobile device camera

Financial Inclusion

Ideal for developing markets and underserved

Operational Flexibility

Static or dynamic codes for one-time or recurring use

Ease of Integration

Can be easily linked with back office applications
